HydraMate

Water Tracking App

Small habits.
A healthier, brighter you.

Discovery Sprint
Brainstorm

1. Core User Jobs-to-be-Done

Busy adults (25–40) who know they should drink more but forget

- Remember to drink water throughout the day
- Easily log intake with minimal effort
- See progress toward a daily goal
- Feel better (more energy, focus, less headaches)
- Build a consistent, long-term habit without it feeling like a chore
- Adapt to my changing routine (work, travel, exercise, etc.)
- Feel a sense of accomplishment

"I want to take care of myself, but I get busy and water just isn't top of mind."

2. Key Friction Points in Existing Behavior

Why users don't drink enough today

- It's easy to forget during a busy day
- Logging feels like a hassle
- No immediate visible benefit
- Inconsistent routines (meetings, travel, work-from-home, social events)
- Unsure how much they actually heed
- Existing apps feel too complex or not engaging
- Water isn't as "exciting" as other health goals (e.g., fitness, nutrition)
- Lack of contextual reminders (e.g., after meetings, workouts)

"I know I should drink more, but it's not a priority when I'm busy."

3. Feature Ideas (Effort vs. Impact)

MVP candidates vs. future bets

Smart reminders (time, location, routine)	L / H
One-tap logging (quick add, widgets)	L / H
Personalized daily goal (age, weight, activity)	M / H
Visual progress (simple, satisfying)	L / M
Streaks & achievements	M / M
Adaptive reminders (learns your behavior)	M / H
Social accountability (friends, challenges)	M / M
AI-powered insights (patterns, tips)	H / H
Integration with wearables (Apple Health, Fitbit)	M / H
Custom drink types (water, electrolytes, etc.)	L / M
Personalization (themes, avatars)	L / L

L = Low M = Medium H = High

High impact Medium impact Low impact

4. Monetization Paths (with Tradeoffs)

Options to explore

Freemium model
- Core tracking free, premium features (insights, personalization, advanced reminders)
- + Large user base | – Lower ARPU, need strong conversion

Subscription (monthly / annual)
- Full feature set (AI insights, integrations, themes)
- + Predictable revenue | – Higher churn risk

Corporate wellness (B2B)
- Offer to employers (team challenges, dashboards)
- + Higher LTV | – Longer sales cycle, different roadmap

Partnerships & affiliate
- Hydration products (bottles, filters, electrolyte brands)
- + Additional revenue | – Risk of misalignment with user trust

In-app ads (not preferred)
- Free for all users
- + Easy to implement | – Can harm user experience

Strategic tension:
Maximize user growth (free, low friction) vs. monetize early without compromising experience or trust.

5. Retention Risks and How to Address Them

Keep users engaged long-term

Key Retention Risks	Potential Solutions
Users lose interest after initial novelty	Introduce new milestones, insights, seasonal challenges
Reminders become annoying	Smart, adaptive reminders (frequency, channels, quiet hours)
No visible health benefits (feels pointless)	Show short-term benefits (energy, focus), insights, and encouragement
Life changes disrupt the habit (travel, busy periods)	Adaptive goals and flexible schedules
Competing health priorities (fitness, diet, sleep)	Position as part of overall wellness (rather than a standalone task)
App feels generic or not personalized	Personalized insights and recommendations
Users achieve goal and churn	Introduce next-level goals (e.g., optimal hydration, performance, streaks, community)

Strategic tension:
Push for high engagement (more notifications, gamification) vs. risk of notification fatigue and churn. How do we keep it helpful, not annoying?
